ExtremeSwitching X670-G2 Series
Scalable advanced 10Gb aggregation switch.

Product Overview
The ExtremeSwitching X670-G2 product family provides high density 10 Gigabit Ethernet and 40 Gigabit Ethernet switching in a small 1RU form factor. With its versatile design, the ExtremeSwitching X670-G2 provides high density Layer 2/3 10Gb networking with low latency cut-through switching, and IPv4 and IPv6 unicast and multicast routing. This enables the X670-G2 to be flexibly deployed in enterprise aggregation or core backbone environments. The X670-G2 can additionally serve as the controlling aggregation switch within Extreme’s Extended Edge Switching solution.

The X670-G2 comes in two models:
- X670-G2-48x-4q - 48 ports of 1/10Gb SFP+ with 4 ports of 10/40Gb QSFP+
- X670-G2-72x - 72 ports of 1/10Gb SFP+ in 1 RU form factor

The X670-G2-48x-4q supports four QSFP+ ports of 40 GbE. Each 40 Gigabit Ethernet port can be independently configured as 40 Gigabit Ethernet or 4 x 10 Gigabit Ethernet.

The X670-G2-72x model supports 72 ports of native 1Gb/10Gb SFP+ ports in a single compact system without the requirement to use break-out cables to achieve high density 10Gb connections.

High-Performance Stacking
The X670-G2 supports 4 different methods of stacking: SummitStack-V, SummitStack-V80, SummitStack-V160, and SummitStack-V320.

SummitStack-V—Flexible Stacking Over 10 Gigabit Ethernet
ExtremeXOS supports the SummitStack-V capability using 2 of the native 10 GbE ports on the faceplate as stacking ports, enabling the use of standard cabling and optics technologies used for 10 GbE SFP+. SummitStack-V provides long-distance stacking connectivity of up to 40

Highlights
Business Alignment
- X670-G2-48x-4q - 48 ports of 1/10Gb SFP+ with 4 ports of 10/40Gb QSFP+
- X670-G2-72x - 72 ports of 1/10Gb SFP+ in 1 RU form factor

Operational Efficiency
- Full ExtremeXOS® feature set supporting switching, routing, SDN, Data Center Bridging, MPLS, and Audio Video Bridging
- Controlling aggregation switch for V400 edge devices with Extreme Extended Edge Switching
- SummitStack™ support enables flexible stacking configurations with other stackable ExtremeXOS product lines
- IEEE 1588 PTP Timing with integrated timing output ports
- All configurations provide non-blocking, line rate performance
- Low latency cut-through mode
- Front-to-Back or Back-to-Front airflow
km while reducing the cable complexity of implementing a stacking solution. SummitStack-V is compatible with X440, X440-G2, X450, X450-G2, X460, X460-G2, X480, X670, X670V, and X770 switches running the same version of ExtremeXOS. SummitStack-V enabled 10 GbE ports must be physically direct-connected.

**SummitStack-V80/V160/V320—Flexible Stacking Over 40 Gigabit Ethernet**

The X670-G2-48x-4q also supports high-speed 80Gbps, 160 Gbps, and 320Gbps stacking using QSFP+ ports, which is ideal for demanding applications where a high volume of traffic traverses through the stacking links, yet bandwidth is not compromised through stacking. SummitStack-V80, -V160, and -V320 can support passive copper cables (up to 1m), active multi-mode fiber cable (up to 100m), and QSFP+ optical transceivers for 40 GbE up to 10km. With SummitStack, the X670-G2-48x-4q provides a flexible stacking solution inside the data center or central office to create a virtualized switching infrastructure across rows of racks.

**ExtremeXOS Intelligent L2 and L3 Switching**

The X670-G2 supports sophisticated and intelligent Layer 2 switching, as well as Layer 3 IPv4/IPv6 routing including policy-based switching/routing, Provider Bridges, bidirectional ingress and egress Access Control Lists, and bandwidth control by 8 Kbps granularity both for ingress and egress.

To provide scalable network architectures used mainly for Carrier Ethernet network deployment, the X670-G2 supports MPLS LSP-based Layer 3 forwarding and Hierarchical VPLS (H-VPLS) for transparent LAN services. With H-VPLS, transparent Layer 3 networks can be extended throughout the Layer 3 network cloud by using a VPLS tunnel between the regional transparent LAN services typically built by Provider Bridges (IEEE 802.1ad) technology.

**1588 Precision Time Protocol (PTP)**

The X670-G2 offers Boundary Clock (BC), Transparent Clock (TC), and Ordinary Clock (OC) for synchronizing phase and frequency and allowing the network and the connected devices to be synchronized down to microseconds of accuracy over Ethernet connection.

**Audio Video Bridging (AVB)**

The X670-G2 series supports IEEE 802.1 Audio Video Bridging to enable reliable, real-time audio/video transmission over Ethernet. AVB technology delivers the quality of service required for today's high-definition and time-sensitive multimedia streams.

**Low Latency Switching for Cluster Computing**

The X670-G2 can achieve latency less than 600 nanoseconds and supports cut-through switching for latency-sensitive cluster computing.

**Extended Edge Switching**

The X670-G2 supports Extreme Extended Edge Switching, an innovative solution that simplifies the deployment and operation of edge switches. With this solution, the X670-G2 can be meshed with economical V400 Series access devices to form a single logical switch. Advanced X670-G2 services can then be seamlessly delivered to the V400 edge switch. The result is a simplified operational model that reduces costs.

**Modular Operating System for Non-Stop Operation**

**Loadable Software Modules**

The modular design of the ExtremeXOS OS allows the adding or upgrading of individual software modules dynamically without requiring a system reboot, leading to higher availability in the network.

**Preemptive Multitasking and Protected Memory**

The X670-G2 series switches allow each of many applications—such as Open Shortest Path First (OSPF) and Spanning Tree Protocol (STP)—to run as separate OS processes that are protected from each other. This drives increased system integrity and inherently protects against cross-platform DoS attacks.

**Process Monitoring and Restart**

ExtremeXOS increases network availability using process monitoring and restart. Each independent OS process is monitored in real time. If a process becomes unresponsive or stops running, it can be automatically restarted.

**Rich OAM Suite – CFM, Y.1731, BFD**

The X670-G2 series switches support a rich suite of protocols to help with Operations, Administration and Maintenance. Connectivity Fault Management (CFM) allows detection, verification, and isolation of connectivity failures in virtual bridged LAN. Y.1731 is largely similar to CFM but also supports performance management by way of frame delay and frame delay variation measurements. Bidirectional Forwarding Detection (BFD) is a hello protocol that provides the rapid detection of failures in the forwarding path and helps the separation of control plane connectivity from forwarding plane connectivity.
By having multiple control plane protocols like OSPF or MPLS rely on BFD to detect forwarding plane connectivity failures, network operators can benefit from simpler network profiling and planning, and consistent and predictable re-convergence times.

**MPLS**

On the X670-G2 series switches MPLS can be enabled, if needed, by way of an optional feature pack. MPLS provides the ability to implement traffic engineering and multi-service networks, and improve network resiliency. The MPLS protocol suite provides the ability to deploy services based on L2VPNS (VPLS/VPWS), BGP-based L3VPNS; LSP Establishment based on LDP, RSVP-TE, Static provisioning; Integrated OAM tools like VCCV, BFD and CFM; And MPLS Fast Reroute to support rapid local convergence around network failures.

**High Availability Network Protocols**

**Ethernet Automatic Protection Switching (EAPS)**

EAPS allows the IP network to provide the level of resiliency and uptime that users expect from their traditional voice network. EAPS is more adaptable than Spanning Tree or Rapid Spanning Tree protocols and can achieve sub-second recovery that delivers consistent failover regardless of the number of VLANs, network nodes or network topology in Extreme Networks-recommended configurations.

EAPS functionality increases network recovery time, which results in significant reduction in Voice-over IP call drop rates and improvement in digital video performance in supported solution configurations.

**Spanning Tree/RAPID Spanning Tree Protocols**

The X670-G2 supports Spanning Tree (802.1D), Per VLAN Spanning Tree (PVST+), Rapid Spanning Tree (802.1w) and Multiple Instances of Spanning Tree (802.1s) protocols for Layer 2 resiliency.

**Software-Enhances Availability**

Software-enhanced availability allows users to remain connected to the network even if part of the network infrastructure is down. The X670-G2 continuously checks for problems in the uplink connections using advanced Layer 3 protocols such as OSPF, VRRP and Extreme Standby Router Protocol (ESRP, supported in Layer 2 or Layer 3), and dynamically routes traffic around the problem.

**Equal Cost Multipath**

Equal Cost Multipath (ECMP) routing allows uplinks to be load balanced for performance and cost savings while also supporting redundant failover. If an uplink fails, traffic is automatically routed to the remaining uplinks and connectivity is maintained.

**Link Aggregation (802.3AD)**

Link aggregation allows trunking of up to 32 links on a single logical connection, for up to 320 Gbps of redundant bandwidth per logical connection.

**Multi-Switch LAG (M-LAG)**

M-LAG can address bandwidth limitations and improve network resiliency, in part by routing network traffic around bottlenecks, reducing the risks of a single point of failure, and allowing load balancing across multiple switches.

**Hardware Redundancy**

X670-G2 series switches support a dual redundant AC/DC power supply to provide high availability. The power supply can be hot-swapped and replaced should it fail. Summit X670-G2 also supports standardized N+1 redundant hot-swappable fan units.

**Robust IP and MAC Security Framework**

**Media Access Control (MAC) Lockdown**

MAC security allows the lockdown of a port to a given MAC address and limiting the number of MAC addresses on a port. This capability can be used to dedicate ports to specific hosts or devices such as VoIP phones or printers and avoid abuse of the port—a capability that can be especially useful in environments such as hotels. In addition, an aging timer can be configured for the MAC lockdown, protecting the network from the effects of attacks using (often rapidly) changing MAC addresses.

**IP Security**

ExtremeXOS IP security framework helps protect the network infrastructure, network services such as DHCP and DNS and host computers from spoofing and man-in-the-middle attacks. It also protects the network from statically configured and/or spoofed IP addresses and builds an external trusted database of MAC/IP/port bindings providing the traffic’s source from a specific address for immediate defense.
Identity Management
Identity Manager allows network managers to track users who access their network. User identity is captured based on NetLogin authentication, LLDP discovery and Kerberos snooping. ExtremeXOS uses the information to then report on the MAC, VLAN, computer hostname, and port location of the user. Further, Identity Manager can create both roles and policies, and then bind them together to create role-based profiles based on organizational structure or other logical groupings, and apply them across multiple users to allow appropriate access to network resources. In addition, support for Wide Key ACLs further improves security by going beyond the typical source/destination and MAC address as identification criteria access mechanism to provide filtering capabilities.

Threat Detection and Response

Clear-Flow Security Rules Engine
CLEAR-Flow Security Rules Engine provides first-order threat detection and mitigation, and mirrors traffic to security appliances for further analysis of suspicious traffic in the network.

sFlow
The X670-G2 series supports hardware-based sFlow® sampling that provides the ability to sample application-level traffic flows on all interfaces simultaneously.

Port Mirroring
To allow threat detection and prevention, the X670-G2 supports many-to-one and one-to-many port mirroring. This allows the mirroring of traffic to an external network appliance such as an intrusion detection device for trend analysis or for utilization by a network administrator for diagnostic purposes. Port mirroring can also be enabled across switches in a stack.

Line-Rate Ingress and Egress ACLs
ACLs are one of the most powerful components used in controlling network resource utilization as well as in protecting the network. The X670-G2 series supports up to 4,096 ingress ACLs and 1,024 egress ACLs per system based on Layer 2-, 3- or 4-header information such as the MAC or IP source/destination address. ACLs are used for filtering the traffic, as well as classifying the traffic flow to control bandwidth, priority, mirroring, and policy-based routing/switching.

Denial of Service Protection
The X670-G2 series effectively handles Denial of Service (DoS) attacks. If the switch detects an unusually large number of packets in the CPU input queue, it assembles ACLs that automatically stop these packets from reaching the CPU. After a period of time these ACLs are removed, and reinstalled if the attack continues. ASIC-based LPM routing eliminates the need for control plane software to learn new flows, allowing more network resilience against DoS attacks.

Secure and Comprehensive Network Management
As the network becomes a foundation of the enterprise application, network management becomes an important piece of the solution. The X670-G2 supports comprehensive network management through Command Line Interface (CLI), SNMP v1, v2c, v3, and ExtremeXOS ScreenPlay embedded XML-based Web user interface. With a variety of management options and consistency across other Extreme Networks modular and stackable switches, X670-G2 series switches provide ease of management for demanding converged applications.

Supported Protocols and Standards
A list of supported protocols and standards is available on the Extreme Networks website at: http://www.extremenetworks.com/go/xos
General Specifications

Performance and Scale
- X670-G2-48x-4q – 1280Gbps switch bandwidth, 952Mpps forwarding rate
- X670-G2-72x – 1440Gbps switch bandwidth, 1071Mpps forwarding rate
- 9216 Byte maximum packet size (Jumbo Frame)
- Store-and-Forward and Cut-Through switching support
- Less than 600 nanoseconds latency
- 128 load sharing trunks, up to 32 members per trunk
- 4096 VLANs (Port, Protocol, IEEE 802.1Q)
- 4096 ingress and 1024 egress ACL rules per switch

Forwarding Tables
- Layer 2 / MAC Addresses: 288K
- IPv4 Host Addresses: 136K
- IPv4 LPM Entries: 16K
- IPv6 Host Addresses: 48K
- IPv6 LPM Entries: 8K

CPU, Memory
- 1GHz 64-bit CPU
- 2GB DDR3 ECC SDRAM
- 4GB eMMC Flash Memory

QOS, RATE LIMITING
- 4096 ingress bandwidth meters and 1024 egress meters
- Ingress and egress bandwidth policing/rate limiting per flow/ACL
- 8 QoS egress queues/port
- Egress bandwidth rate shaping per egress queue and per port
- Rate Limiting Granularity: 8 Kbps – 1Mbps

LED Indicator
- Per port status LED including power status
- System Status LEDs: management, fan and power

External Ports – X670-G2-48x-4q
- 48 ports 10GBASE-X SFP+ (1G/10Gb dual speed)
- 4 ports 40GBASE-X QSFP+ (10G/40Gb dual speed)
- One RJ-4S S-232c Serial port (control port)
- One 10/100/1000BASE-T out-of-band management port

External Ports – X670-G2-72x
- 72 ports 10GBASE-X SFP+ (1G/10Gb dual speed)
- One RJ-4S S-232c Serial port (control port)
- One 10/100/1000BASE-T out-of-band management port

Power Supply Support
- 550W AC PSU – Front-Back and Back-Front airflow options
- 550W DC PSU – Front-Back and Back-Front airflow options

Physical Specifications

Height: 1.73 Inches/4.4 cm
Width: 17.4 Inches/44.1 cm
Depth: 19.2 Inches/48.7 cm
Weight: 12.85 lbs/5.83 kg

X670-G2-72
Height: 1.73 Inches/4.4 cm
Width: 17.4 Inches/44.1 cm
Depth: 19.2 Inches/48.7 cm
Weight: 15.42 lbs/7.0 kg

X670 Fan Module
Height: 1.65 Inches/4.2 cm
Width: 1.65 Inches/4.2 cm
Depth: 3.98 inches /10.1 cm
Weight: 0.357 lbs./0.162 kg

Operating Specifications

Operating Temperature Range: 0° C to 45° C (32° F to 113° F)
Operating Humidity: 10% to 95% relative humidity, non-condensing
Operating Altitude: 0-3,000 meters (9,850 feet)
Operational Shock (Half Sine): 30 m/s² (3 g), 11ms, 60 Shocks
Operational Random Vibration: 3-500 Hz @ 1.5g rms

Storage and Transportation (Packaged)
Transportation Temperature: -40° C to 70° C (-40° F to 158° F)
Humidity: 10% to 95% RH, non-condensing
Packaged Shock (Half Sine): 180 m/s² (18 G), 6ms, 600 shocks
Packaged Sine Vibration: 5-62 Hz @ Velocity 5mm/s, 62-500 Hz @ 0.2G
Packaged Random Vibration: 5-20 Hz @ 1.0 ASD w/-3dB/oct. from 20-200 Hz
14 drops min on sides & corners @ 42” (<15 kg box)

Regulatory/Safety

North American Safety of ITE
UL 60950-1 2nd Ed, 2011-12-19, Listed Device (U.S.)
CSA 22.2 #60950-1-07 2nd Ed, 2011-12. (Canada)
Complies with FCC 21CFR 1040.10 (U.S. Laser Safety)
CDRH Letter of Approval (U.S. FDA Approval)

European Safety of ITE

### Acoustic Information

#### Dual 550W AC PS with Front to Back (FB) air flow

- **X670-G2-48x-4q**

  - Bystander Sound Pressure*: 60.2 dB(A), 0°C to 45°C
  - Declared Sound Power (LWAd)**: 7.3 bels, 0°C to 45°C

- **X670-G2-72x**

  - Bystander Sound Pressure*: 58.3 dB(A), 0°C to 35°C
  - 70.1 dB(A), 45°C
  - Declared Sound Power (LWAd)**: 7.0 bels, 0°C to 35°C
  - 8.4 bels, 45°C

#### Dual 550W DC PS with Front to Back (FB) air flow

- **X670-G2-48x-4q**

  - Bystander Sound Pressure*: 61.3 dB(A), 0°C to 45°C
  - Declared Sound Power (LWAd)**: 7.4 bels, 0°C to 45°C

- **X670-G2-72x**

  - Bystander Sound Pressure*: 55.0 dB(A), 0°C to 35°C
  - 68.8 dB(A), 45°C
  - Declared Sound Power (LWAd)**: 6.5 bels, 0°C to 35°C
  - 8.1 bels, 45°C

#### Dual 550W AC PS with Back to Front (BF) air flow

- **X670-G2-48x-4q**

  - Bystander Sound Pressure*: 58.9 dB(A), 0°C to 35°C
  - 62.5 dB(A), 45°C
  - Declared Sound Power (LWAd)**: 7.3 bels, 0°C to 35°C
  - 7.6 bels, 45°C

- **X670-G2-72x**

  - Bystander Sound Pressure*: 58.5 dB(A), 0°C to 35°C
  - 62.4 dB(A), 45°C
  - Declared Sound Power (LWAd)**: 7.3 bels, 0°C to 35°C
  - 7.6 bels, 45°C

#### Dual 550W DC PS with Back to Front (BF) air flow

- **X670-G2-48x-4q**

  - Bystander Sound Pressure*: 59.8 dB(A), 0°C to 35°C
  - 72.6 dB(A), 45°C
  - Declared Sound Power (LWAd)**: 7.3 bels, 0°C to 35°C
  - 8.2 bels, 45°C

- **X670-G2-72x**

  - Bystander Sound Pressure*: 56.4 dB(A), 0°C to 35°C
  - 73.0 dB(A), 45°C
  - Declared Sound Power (LWAd)**: 6.7 bels, 0°C to 35°C
  - 8.3 bels, 45°C

---

*Bystander Sound Pressure is presented only for comparison to other products.

## Supported System Configurations

Fan modules and power supplies must be ordered with all base models. A full complement of fan modules is required. A single power supply is required with an optional second power supply for redundancy. AC and DC power supplies can be mixed in a system. Air flow direction of fan modules and power supplies must match.

</tr>
</tbody>
</table>

¹ - Not supported for SummitStack links
² - Only 1Gb speed supported with 10070H when used with X670-G2

Note: See the ExtremeXOS Hardware/Software Compatibility and Recommendation Matrices document for a full list of supported devices and ExtremeXOS release recommendations.

**Power Cords**

In support of the Extreme Networks Green Initiatives, power cords can be ordered separately but need to be specified at the time order. Please refer to [www.extremenetworks.com/product/powercords/](http://www.extremenetworks.com/product/powercords/) for details on power cord availability for this product.
