

► Regain IT Control of Data and Enhance Collaboration with Commvault® Secure File Sharing

► QUICK FACTS

Technology has changed the behavior of the typical information worker, enabling communication and collaboration in real time. The anytime, anywhere information workforce uses multiple devices such as PC's, tablets and smart phones and needs platform-agnostic, on-demand access to their files from anywhere at any time. While the enterprise clamors to determine business requirements and find budget, users are on their own adopting shadow IT solutions that fit their needs.

makers are concerned³

- Keeping the mobile workforce working efficiently means protecting their devices, while making it easy for them to access and recover lost or deleted files. Commvault protects your data wherever it lives with secure, efficient backup and recovery.

CxO's and other business leaders want employees to be able to share information easily and collaborate seamlessly and securely with their colleagues and external teams so that they stay productive from anywhere at any time. IT leaders need to ensure that users are not putting the business at risk by exposing corporate data to unauthorized access or loss. Legal and compliance leaders desire to search corporate data comprehensively and discover it efficiently to minimize the risks and costs from audits and litigation.

► PROTECT, ACCESS AND SHARE DATA EASILY

Commvault® Endpoint Data Protection software is a complete solution that increases end user productivity by providing unparalleled access to protected content for users to easily search, sync, and share without compromise to security. Data resides in the ContentStore, a virtual repository for all Commvault software managed data that drives efficiency and enhances value from protected content, through access, security, governance, and analytics. File sharing fosters collaboration with colleagues, partners and customers in a private cloud as an alternative to e-mail or other consumer focused file sharing options.

► SHARE A FILE INTERNALLY WITH COLLEAGUES

Quickly copy and paste the link to a file from the ContentStore and send to a colleague over Instant Message, enabling them to easily view the file on the web without having to mail as an attachment.

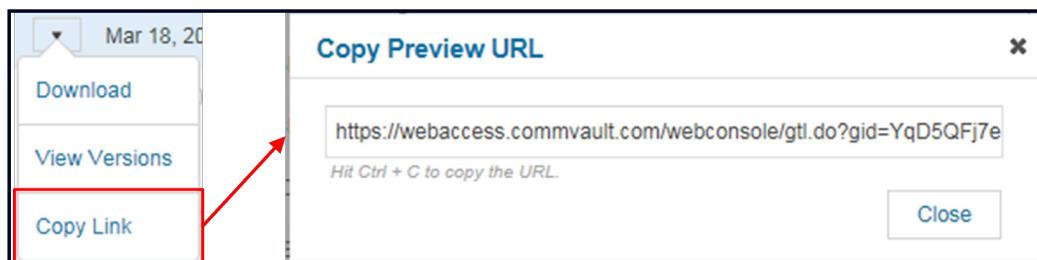

Figure 1: Copy link from web console and share via email or instant message

► COLLABORATE WITH PARTNERS AND CUSTOMERS

Many files today are too large for e-mail, exceeding message attachment size limits, hindering the ability to iterate and revise documents with partners and customers. Share a link or simply create a shared file or folder with an individual or group to allow them to view, download, and upload new files and versions from their web browser or mobile app. Content owners can manage access by adding or removing users from the share or by deleting the share.

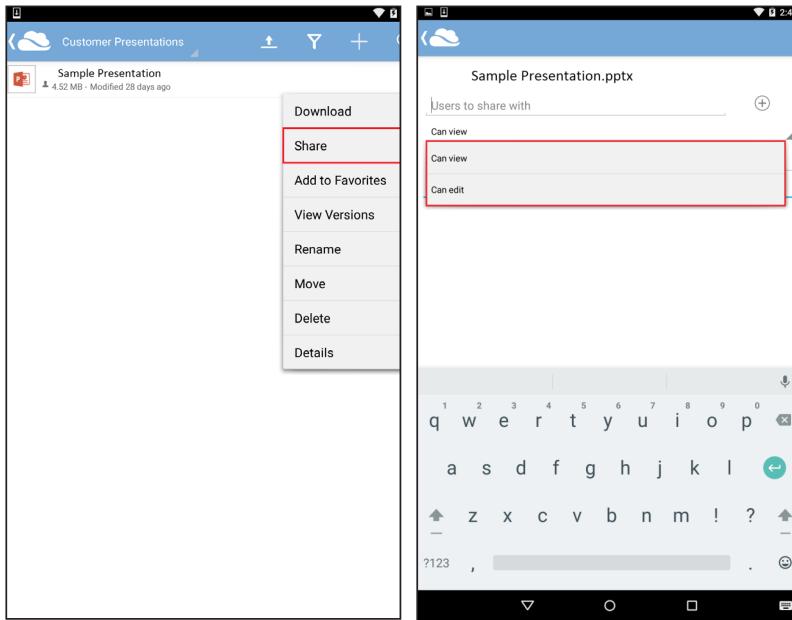

Figure 2: Invite people to share and set permissions by email or group

► SECURELY SYNC AND SHARE DATA USING THE EDGE DRIVE™ FOLDER

The Edge Drive folder enables users to automatically sync content across multiple devices and easily share it with both internal and external colleagues. Simply drag and drop files or folders to the Edge Drive folder and the content is readily available for access and sharing via web console or mobile app. Enjoy the control and data governance that the business demands with the ease of use employees desire.

IDC: Critical Need for Edge Data Protectionⁱ

Read why IDC believes the need to protect sensitive data residing on desktops, laptops, and mobile devices is more critical than ever and how Commvault Endpoint Data Protection technology can meet end user demands by delivering a solution that is secure and allows users access to their data anywhere and at any time.

► IT CONTROLS TO PREVENT UNAUTHORIZED SHARING

IT can ensure sensitive business data remains safe by using customized policies to limit who can share data. Commvault software brings corporate data back into IT control while maintaining the ease of use your end users demand, without sacrificing the ability to manage the content being shared within corporate guidelines and away from unsecure, consumer-oriented cloud file sharing services.
