

▶ Commvault Secure File Sharing

HIGHLIGHTS

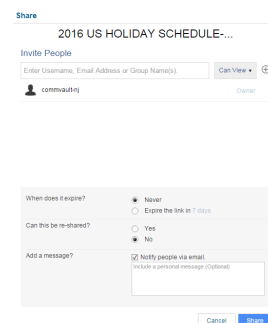

- Provide company sanctioned file, sync & share using Commvault's virtual storage repository where end-users can securely access and share files without giving up data ownership, while extending data visibility and control to IT.
- Achieve tighter administrative control over company data "living out in the wild", with granular policy controls and permission settings along with enterprise-grade security, which means data is encrypted at source, in transit, and at rest.
- Extend data governance and compliance mandates to laptops by leveraging Commvault's integrated content-based search, discovery, and legal hold tools.
- Improve Mobile Productivity with easy to use mobile app access and content syncing across BYOD and company issued devices.
- Simplify backup of file, sync & share data by extending the solution to include Commvault software's integrated endpoint data protection.

File sync-and-share systems are here to stay with mobile workers and their mobile devices, however, these solutions do not provide effective data protection by themselves. The best way around this is to find a secure file sharing solution with integrated endpoint backup, where a single solution is protecting this data a single virtual repository. This allows you to improve end user collaboration and productivity while restricting access to confidential data and laying a strategic foundation that will support companywide growth and your organization's migration towards a 21st century information governance program.

With Commvault's Secure File Sharing solution, user productivity is improved by keeping files synchronized and accessible across devices. Users' store, access and share files from a virtual drive or storage point named Edge Drive, which is an IT managed repository for all user's data. File and folder access control and permissions can be controlled by end users from a browser or mobile app. Commvault's Secure File Sharing solution also helps IT regain control of data to reduce risk of regulatory, governance and security issues. Built in capabilities such as custom data policy settings, granular access controls and robust encryption ensures business data remains safe, while extending search and legal hold capabilities to support compliance and eDiscovery requests.

MOBILE APP FOR
IOS 8↑ OR ANDROID 4.0↑.

CONTENT OWNERS CAN MANAGE
PERMISSIONS ON THE FLY

▶ With Commvault, you can protect data no matter where it resides and empower users to access their data and files from any device, anywhere, anytime. You do so much more than backup; you empower a mobile workforce.

KEY CAPABILITIES

CAPABILITY	BENEFITS
Access and Sharing Controls (Administrative)	Control which internal users and external partners have access, what they can share and who they can share with. Granular role-based access control managed via Active Directory, Domino Notes Directory, or LDAP. Option of two-factor PIN authentication or single sign on (SSO).
File and Folder-level Permissions (End user)	Easily assign file and folder level permissions such as: <ul style="list-style-type: none"> • View, Edit • Share link expiration & password control • Allow/block content from being re-shared Content owners can also manage access on the fly by adding or removing users assigned to a shared file or folder.
Mobile Access	File, Sync and Share apps are available for iOS 8.0 and later and Android 4.0 and later, and Windows 8 tablet users can access the system via a web portal.
Virtually Unlimited Scalability	Scale easily from hundreds of users to hundreds of thousands of users and from a single location to hundreds of locations globally with Commvault's agile and web scale platform.
Optimize Security	Secure data at the endpoint, in transit and in the data center with SSL encryption during transfer and encryption at rest via AES, Blowfish, 2DES and Ghost. Endpoint data is encrypted with Commvault's proprietary modules which are FIPS 140-1 and 140-2 certified.
OS Support for Edge Drive Plug-In	Windows 7, Windows 8 PRO, Windows 8.1, Windows 10, MAC OS X 10.8, MAC OS X 10.9, and the most current levels of popular Linux distributions.
Deployment Options	On-premises and hybrid cloud.
Licensing Options <ul style="list-style-type: none"> • Secure File Sharing • Search Add-on 	File sync & sharing, meta data search, reporting. Licensed per user. Advanced content-based search and legal hold. Licensed per user.
