Panel discussion on "A Sustainable EDGE" in the residential sector

The event also featured a panel discussion led by eminent stakeholders of the building industry. The panel discussed pressing questions such as how affordable green residential projects can be and how we can keep incremental costs in green housing projects to a minimum. Are the end users aware of the benefits that they can reap by occupying green residential buildings?

The event was hosted by VBHC Vaibhava, a residential developer that committed to the leadership of BSR in green building certification. VBHC Vaibhava is also one of the first builders in the country to achieve EDGE certification through the innovative EDGE certification system. They have managed to attract significant attention from stakeholders in the building industry, particularly in India's rapidly expanding real estate market.

The need for the event was to share knowledge about sustainable building practices and how these practices can help reduce the environmental impact of building construction. The panelists emphasized the importance of educating end users about the benefits of green residential buildings and how they can improve the quality of life for residents.

A highlight of the event was the keynote address delivered by Mr. Kishore Jain, Managing Director of VBHC Vaibhava, who spoke about the importance of sustainable building practices and the role of stakeholders in promoting sustainable development. He encouraged everyone to take a proactive role in ensuring the success of sustainable building practices in India.

The event was a great success, and the panel discussion highlighted the importance of sustainable building practices in creating a better future for everyone. It was a great opportunity to learn from experts in the field and to share knowledge and ideas.
