The U.S. Green Building Council and its stakeholders have led the transformation of the green building marketplace through USGBC’s LEED (Leadership in Energy and Environmental Design) green building program.

We welcome you to attend USGBC’s and GBCI’s maiden event in the Middle East, ‘Conversations on LEED and Sustainability’ in partnership with Dubai Electricity and Water Authority (DEWA) at the Dubai Solar Show & WETEX 2018 on 25th October, 2018.

Join our Case study sessions to hear from market leaders who have demonstrated commitment to sustainability over the years, through exemplary LEED certified projects. While reflecting on their success stories, they will also speak about what the future holds for them, and how USGBC & GBCI continue to serve as catalysts in enabling their sustainability journeys.

LEED v4.1, an incremental step in the evolution of LEED is key in achieving the goal of green buildings and communities for all within a generation and is built on the concept of "all buildings in." We lead you to solutions to positively impact the existing buildings market that impacts the lives of many people. Attend this session to also learn about ‘Arc’, the powerhouse of existing building performance monitoring.

“Our mantra is Partnership is the new leadership. We live and breathe this every day and will continue to partner with industry leaders to push for new and better ways to design, build, maintain, operate, and live in our buildings and communities.”
- Mahesh Ramanujam, President and CEO, USGBC & GBCI.

We have engaged extensively with local bodies in the UAE, who will engage in our Partnerships session to share our collaborative efforts.

What other programs fuel the green business movement? Our technical experts offer deeper understanding of GBCI rating programs such as PEER, SITES, Parksmart and TRUE with solutions on how to tailor them to your projects.

Come “Ask the Experts” to hear from them! This is an open opportunity for consultants, sustainability practitioners and industry professionals to engage directly with our team of experts.
